

Inga Health and Safety Consultants

Let us help you activate your Construction Health and Safety
Career or Resources

Have you completed all the traditional health and safety training courses, only to find that you are not equipped to implement this training within a project environment?

OR

Do you have qualified health and safety resources that do not have the construction experience required to add value to your project?

We have an abundance of suitably qualified, yet inexperienced health and safety officers, who are all seeking employment in the construction industry. The key to successful integration is an understanding of the construction dynamics and how this training can be activated within the construction industry to provide the service required. To assist newly qualified safety practitioners we have developed a 6 module bridging course identifying implementation opportunities and challenges. These modules will equip the candidates to successfully implement their baseline knowledge within the construction project environment.

The following modules will be presented by a health and safety specialist who has more than 15 years experience in the construction industry:

1. Understanding your role as a construction health and safety practitioner (CR 6.6)
2. Understanding and implementing the construction regulations – the safety file.
3. Developing and managing the safety organization.
4. Incident prevention and investigation techniques.
5. Health and safety program management in construction including inspection and auditing.
6. Efficient management reporting techniques.

These modules can be done individually at a cost of R350-00 per module, or as a 2½ day session in Richards Bay. If you need help [give us a call today and let's see](#) how we can activate your health and safety program.

We are offering all 6 modules for – R1800-00
